

Influx - Front-end assignment-I

Short summary of what you need to do

Create an react/next based application to match the UI attached in the exercise folder

Deep Dive

- Desktop and responsive views are provided. Desktop view is named as (Desktop_View.png). And responsive view is named as (MobileView.png). Both the images will be present in the exercise folder
- The icons and images are provided inside the “Assets” folder
- The fonts are provided inside the “Fonts” folder
- You can determine the size and weight of each line/paragraph based on your attention to detail.
- CTAs are not required for any of the buttons.
- The accordion data should be fetched from a static JSON within your project.
- You are free to use any 3rd party plugins you deem appropriate, But It will be better to keep it at a minimum as this will also be 1 of your scoring points.
- Desktop View specs
 - The header should be fixed when the page is scrolled.
 - The header’s bg should have a blurred background. A reference image is put inside the exercise folder (Desktop_View_HeaderBG)
- Responsive View specs
 - The footer should be fixed and visible at all times. The footer should have a blurred background as well. Reference image is added to the exercise folder (MobileView_Footer_BG.png)
 - Though in the reference image, The fold 1 hero banner is not given. We want you to use your imagination to use the given hero banner to be used in the responsive view as well

Tech Stack

- **Must Use**
 - Reactjs or Next.js
 - Bootstrap
- **Optional**
 - React-Bootstrap
- **Must NOT Use**
 - Angular
 - Redux
